12 SCImago Journal Rank (SJR)

The SJR indicator is a measure of the scientific influence of scholarly journals that accounts for both the number of citations received by a journal and the importance or prestige of the journals where the citations come from. A journal's SJR is a numeric value indicating the average number of weighted citations received during a selected year per document published in that journal during the previous three years.

Each subject category of journals is divided into four quartiles: Q1, Q2, Q3, and Q4.

Q1 is occupied by the top 25% of journals in the list;

Q2 is occupied by journals in the 25% to 50% group;

Q3 is occupied by journals in the 50% to 75% group; and

Q4 is occupied by journals in the 75% to 100% group.

- 1) First Author will get 60% and Second Author will get 40% of the Total incentives after showing proof of publication in Scopus or Clarivate.
